

EEBOB Seminar Series Fall 2013 Archive

The Ecology, Evolution, Behavior, & Organismal Biology (EEBOB) seminar series focuses on biological topics at whole-organism and higher scales of organization. Speakers include KSU faculty, graduate students, & guests from other institutions.

Sept 10th, 2013: Marcus Davis, Kennesaw State University

A Show of Hands - What Arctic fossils and Missouri caviar tell us about the evolution of fingers and toes

Sept 17th, 2013: Andrew Kramer, University of Georgia

Finding mates, surviving predators and staying competitive: zooplankton in microcosm and whole-lake experiments

Sept 24th, 2013: Brittany Moore, Kennesaw State University

*Vocal communication and neuropil fraction of Broca's area 44/45 in captive chimpanzees *Pan troglodytes* and bonobos *Pan paniscus**

Oct 1st, 2013: Sigrid Smith, University of Michigan

Understanding changes in community structure and ecosystem health in small ponds and big lakes

Oct 8th, 2013: Joel McNeal, Kennesaw State University

How to turn your Morning Glory into a vampire plant with only 837,216 simple mutations

Oct 15th, 2013: Tom Barnum, University of Georgia

Consequences of catastrophic amphibian declines on the food web of a Neotropical stream

Oct 22nd, 2013: Mark Mandica, Kennesaw State University

Adaptation and Phenotypic Plasticity in Obligate Ephemeral Wetland Breeding Amphibians

Oct 29th, 2013: Mary Freeman, USGS Patuxent Wildlife Research Center

Flows, fishes, and freshwater conservation

Nov 5th, 2013: Bill Ensign, Kennesaw State University

Everything I know about fish I learned in kindergarten

Nov 12th, 2013: Joseph Mendelson, Zoo Atlanta & Georgia Institute of Technology

Scope & Scale of Global Amphibian Extinctions

Nov 19th, 2013: Troy Mutchler, Kennesaw State University

Integrating mechanisms that influence the persistence of fishes in urban streams: a proposal
